

Trust Company AI Integration Platform (Proof of Concept)

Data Flow Diagram

All data at rest in ca-central-1 (Canada) | The only cross-border flow is matter-search inference | Illustrative reference version

FLOW 1 | GLOBAL MATTER SEARCH (on demand, staff-initiated)

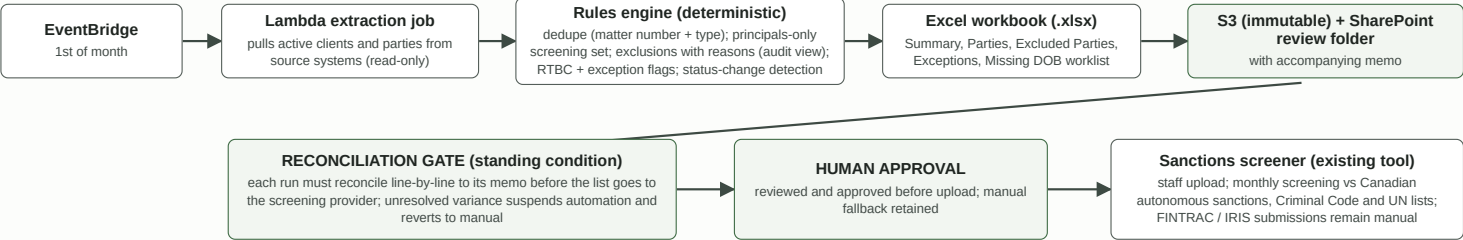

FLOW 2 | QUARTERLY MATTER STATUS AND FINANCIAL REPORT DRAFTS (scheduled)

In-region processing only; drafts never leave ca-central-1 / SharePoint. Internal notifications (drafts ready, job failure) go to internal addresses only.

FLOW 3 | MONTHLY AML / SANCTIONS SCREENING NAME EXPORT (1st of each month)

NO LLM IN THIS FLOW. Deterministic structured extraction only; names and dates of birth never leave Canada; SIN excluded from the export entirely.

Boundary summary: data at rest is exclusively in the company's AWS account in ca-central-1 (Montreal) and in the company's Microsoft 365 tenant. The only data crossing the border is transient, encrypted matter-search inference traffic (Flow 1, amber), protected by the AWS DPA and Bedrock zero-data-retention configuration. All source-system access is read-only. Identity: Cognito SAML to Entra ID with MFA. Credentials: AWS Secrets Manager. Audit: CloudTrail/CloudWatch, immutable outputs. Any expansion of data flows outside Canada requires a new risk acceptance.
